

CONNECTING POWER & CONTROLLER

1

MOUNT CONTROLLER ON THE WALL

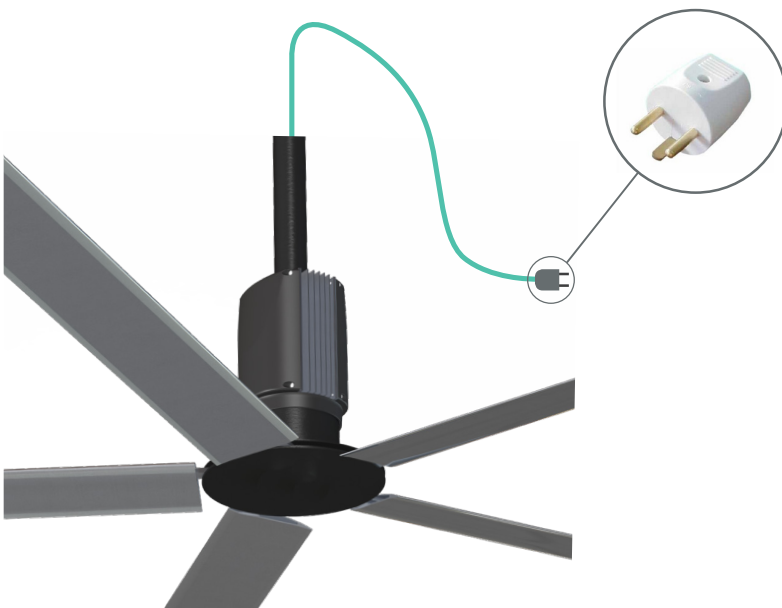

2

CONNECT THE CONTROLLER WITH THE FAN USING A CAT 5E CABLE

3

CONNECT THE POWER PLUG TO THE POWER CORD. THEN CONNECT TO 230V SINGLE PHASE POWER SUPPLY, USING EXTRA POWER CORD AS NEEDED.

IMPORTANT:

DO NOT CONNECT THE CAT 5E CABLE TO ANYTHING OTHER THAN THE NORDICCO CONTROLLER BOX.

DOING SO WILL SEVERELY DAMAGE THE FAN MOTOR AND DRIVE AND MAY POTENTIALLY CAUSE A MOTOR FAULT

CONFIGURING THE CONTROLLER

When connecting the controller using the CAT 5E cable, this screen will appear after a few moments. This screen indicates that a fan is found and is only shown briefly.

The home screen will automatically appear. To go to fan settings, press this button and hold for 4 seconds.

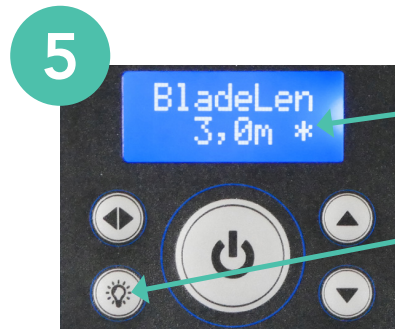

When this screen appears, you are in Fan Settings mode. Press once on the 'arrow down' button.

You are now in Blade Length settings. As a standard, the blade length is set to 1,8 meters, as indicated by the star. Press the shift button to change blade length setting. Continue until you reach the correct fan size.

When you reach the correct fan size press the on/off button to save.

A star will appear when the blade length size is correctly chosen and saved.

Press once to return to home screen.

THE FAN IS NOW CONFIGURED AND READY FOR USE

Before use, please perform an initial security check of the fan on a secure distance by slowly increasing speed by pressing the arrow "up" one speed level at a time. If any shaking, vibrations, or similar appears, decrease speed immediately and make the

fan come to a complete stop. Go back and make sure all installation steps were performed correctly and make any necessary adjustments. Perform a second check, and if any anomalies persist, please turn off fan and contact your local support office.

ENJOY!
